Subject PSNS & IMF Draft NPDES Permit Issues

Mike,

Understandably, senior management is keenly interested in what is happening with our NPDES program so I have been asked to check on a few things.

We are specifically interested in where the EPA stands regarding the three options for moving forward that we all discussed at the last meeting. I think that the last time you spoke to Steve Rupp about this, you indicated that the EPA was generally leaning towards the second option listed in the agenda for the 10/2 meeting: *"Complete the AKART study as part of the compliance schedule in the new permit (three year time line) with the provision that region 10 incorporates, into the draft permit, language that would explicitly list reasonable final limits upon completion and implementation of AKART."*

Additionally, we want to understand what you see as the next steps after your folks have finished reviewing our permit and fact sheet comments.

I appreciate any light you can shed on these two issues.

Thanks

Jerry

Subject: Fw: PSNS&IMF AKART Study

Hi Jerry: Thanks for the phone call. I received this email from Bruce and also received the comments on the fact sheet and permit on 11/10. I will check in with Susan regarding a schedule. She is on maternity leave and just started back on a part time basis this week. She'll remain part time through December and full time in January. So her leave will have some impact on our ability to respond although this project is at the top of her list. So I will check in with her and one of us will get back to you regarding scheduling. - Mike L

PSNS&IMF AKART Study

Susan and Jeanne,

Attached is the latest draft of PSNS&IMF's AKART study. This is being provide as a draft and we really appreciate you taking the extra time to give us your general opinions on content and level of detail before we have this officially signed out by our CO. Obviously PSNS&IMF had a very limited amount of time to produce this report. To meet the timeline imposed by EPA's desire to release a draft permit for public review we had to use more general cost estimates than were included in the two example AKART studies that you provided. However we believe that it still answers the key questions required of an AKART study.

After you have had a chance to review this I would like to have a phone conference with Susan, Jeanne, Jerry and me

to discuss your impressions.

If you both could send me a follow up email with some potential dates for this call I can start matching up calendars to get it scheduled.

Thanks Again,
